DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 2/27/2006 has been entered.

Allowable Subject Matter

2. Claims 1-20 are allowed.

Applicant's invention is drawn to method and apparatus for reducing the time required for call setup in a wireless communication system is addressed herein. A base station (BS) sends a channel assignment message to a mobile station (MS) and performs traffic channel initialization procedures with the MS. After completing the traffic channel initialization procedures, the BS sends a base station acknowledgment message to the MS and proceeds to transmit signaling to the MS without waiting to receive an MS acknowledgment in response to the base station acknowledgment message. Thus, the time normally taken to receive the MS acknowledgment is saved and call setup time reduced.

Applicant's independent claim 1: The present in invention is directed to a method for reducing call setup time as define is the specification (paragraph 0012-0027),

completing traffic channel initialization procedures, sending a base station

acknowledgment message to the MS; proceeding to transmit signaling to the MS

without waiting to receive an MS acknowledgment in response to the base station

acknowledgment message; after proceeding to transmit signaling to the MS, receiving

acknowledgment message; after proceeding to transmit signaling to the MS, receiving

an MS acknowledgment in response to the base station acknowledgment message.

Applicant's independent claim 1 comprises a particular combination of element, which is

neither taught non-suggested by prior art.

Applicant's independent claim 14: The present in invention is directed to a base station as define is the specification (paragraph 0012-0027), comprising. The independent claim identifier the uniquely distinct feature "adapted to send, via the WTE, a base station acknowledgment message to the MS, after completing traffic channel initialization procedures, adapted to proceed to transmit signaling, via the WTE, to the MS without waiting to receive an MS acknowledgment in response to the base station acknowledgment message, and adapted to receive via the WTE, an MS acknowledgment in response to the base station acknowledgment message, after proceeding to transmit signaling to the MS". Applicant's independent claim 1 comprises a particular combination of element, which is neither taught non-suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
